

Medical Clinic Website Documentation

Vlad Lazarescu

1 Introduction

Welcome to the documentation for the website of NeuropraXis, a leading medical clinic dedicated to providing exceptional healthcare services to patients. This documentation serves as a comprehensive guide to understanding the features, functionalities, and structure of our website.

In today's fast-paced world, access to reliable and efficient healthcare services is of paramount importance. Our website aims to bridge the gap between patients and healthcare professionals by offering a user-friendly platform that enables seamless communication, appointment scheduling, and access to essential medical information.

1.1 Purpose of the Website

The primary objective of our website is to enhance the overall patient experience and ensure that accessing healthcare services is convenient, streamlined, and secure. By leveraging the power of technology, we strive to provide our patients with a seamless online experience that complements our exceptional in-person care.

1.2 Key functionalities

Our website encompasses a range of features and functionalities designed to cater to the diverse needs of our patients. Some of the key features include:

1. **Online Appointment Scheduling:** Patients can conveniently schedule appointments with our healthcare professionals through the website, eliminating the need for phone calls or in-person visits.

2. **Health Information Resources:** Browse through an extensive collection of information about the facilities that our clinic offers.
3. **Doctor Information:** Patients can see the list of doctors that are going to help them get past the medical issues that they encountered.
4. **Contact and support:** Patients can see how they can contact us, using the provided map to come to the clinic or using one of the provided phone numbers or email addresses.

2 Description of the provided functions

Right from the home page, the patient can access the button "Schedule an appointment" that will redirect them to another page where they can express their curiosity or their problem. With the usage of a navigation bar, the patient can access other pages of the clinic each one with their own purpose:

1. **Services:** Once they hover over this, a drop-down content will appear and they will be able to see the facilities and the services that our clinic offers.
2. **Doctors:** Here, the clients will be able to see information about our doctors. Each one of them has an image and once that image is pressed, a short description about the doctor will appear, in order to see who they are, the domain in which they practice and where they have studied in order to become the person that they are today.
3. **Contact:** At this page, the client can see the map of the clinic location so that they come and visit for further information or they can simply send an email or call us.
4. **Log In:** Here, they can access multiple functionalities. For example, they can press "Schedule an appointment" and there they can send us their message regarding their curiosity or problems. The data will then be stored in a data base. The other functionality consists in logging into their account or creating a new account.
5. **Sign In:** Here, they can create a new account with a username and a password.

6. **Patient:** This page will appear once they log into their account and it contains a list of previous patients and information about their name, gender, phone number and disease. The admin can modify this information, in order to add more patients or simply modifying the current patients.

3 Site Responsiveness

This website is created using viewer width and viewer height inside CSS in order to be responsive no matter the device you are going to use. Some pages required additional modification in order to be responsive, so I needed to make a new category inside the CSS file for when the client's device has less than 1080pixels width. In this way, the website is going to be efficient and responsive even on mobile devices.

4 Useful functionalities inside the website

1. **Dark Mode Button:** On every page, the user will be able to modify between light mode and dark mode just by pressing a button that is located on the navigation bar. In this way they can select their preferred mode, a mode that will remain selected once they choose it, no matter if they enter a new page or if they exit the website and come back again.
2. **Google Maps Location:** Inside the Contact page, the user will be able to see where our clinic is located. In this way, with the press of a button he can open Google Maps Application and he can come to our clinic in order to speak with our personnel for a more detailed solution of their problem.
3. **Drop Down Menu:** Once they hover over Services on the navigation bar, a drop down menu will appear, consisting of two categories, Analysis and Operations, the user can then press one of them, which will redirect them to a new page where they can see further information about the specific service that we can provide. For example inside the Analysis he can see how our analysis work and how the results will be

sent and how they can speak further with one of our doctors after the results are done.

5 Conclusion

Fundamentally, this was the documentation of NeuropraXis medical clinic's website, a friendly, responsive and easy to use website in such way that our clients can easily find information about it and can schedule an appointment so that they can require further information from our personnel. At the same time, they are able to contact us directly by our email office@neuropraxis.ro or by calling to one of the phone numbers that are available on the website or simply by coming to the location provided in the Contact section.
